MEDICARE

Many HMOs Experience High Rates of Beneficiary Disenrollment

**Health, Education, and
Human Services Division**

B-279786

April 30, 1998

The Honorable Charles E. Grassley
Chairman
The Honorable John B. Breaux
Ranking Minority Member
Special Committee on Aging
United States Senate

Most Medicare beneficiaries live in areas where they can choose to receive health care through the program's traditional fee-for-service arrangement or from a managed care plan that contracts with Medicare. Many beneficiaries who wish to enroll in a health maintenance organization (HMO) can choose from among several available plans. In 1996, we recommended several steps that the Health Care Financing Administration (HCFA), the agency that administers the Medicare program, could take to help beneficiaries choose a managed care plan wisely.¹ Among other things, we recommended that HCFA publicize HMOs' disenrollment rates. Because Medicare beneficiaries enrolled in HMOs can easily switch to another plan or to fee-for-service, disenrollment rates may reflect beneficiaries' relative satisfaction with available HMOs.

In August 1997, the Congress enacted the Balanced Budget Act of 1997 (BBA) which, among other things, mandated that HCFA make comparative information available to beneficiaries, including data on health plans' disenrollment rates.² However, HCFA is not required to publish disenrollment rates until the fall of 1999, when the agency will conduct the first annual Medicare-sponsored health information fair. Moreover, the BBA is unclear as to whether HCFA must publish disenrollment rates for plans that have been in operation for less than 2 years.

This letter responds to your request that we evaluate the feasibility of computing HMO voluntary disenrollment rates from readily available data and analyze the extent to which these rates vary among plans. Specifically, we (1) calculated disenrollment rates for all Medicare HMOs operating in 1996, the most recent data available to us at the time of our analysis; (2) compared the disenrollment rates of plans operating in the same markets; (3) analyzed disenrollment rates of relatively new plans; and

¹Medicare: HCFA Should Release Data to Aid Consumers, Prompt Better HMO Performance (GAO/HEHS-97-23, Oct. 22, 1996).

²P.L. 105-33.

(4) computed the percentage of disenrollees who switched to fee-for-service.

To conduct our study, we analyzed the data HCFA provided us that contained the records of every beneficiary who was enrolled in a Medicare risk-contract HMO in 1996.³ We did not count as disenrollees individuals who died, lost their Medicare eligibility, or moved out of their plans' service areas. We were also careful not to count administrative changes, such as one plan merging with another, as disenrollment. Because disenrollment rates may be misleading for small or very new plans, we do not report rates for plans that have fewer than 250 members or that have operated for less than 7 months. Appendix I describes our methodology. We did our work between January 1997 and April 1998 in accordance with generally accepted government auditing standards.

Results in Brief

Annual disenrollment rates exceeded 20 percent of plans' average monthly membership at more than 40 Medicare HMOs in 1996. In one extreme case, the number of members who disenrolled from a plan equaled 71 percent of that plan's average monthly membership. In contrast, 32 HMOs had disenrollment rates below 5 percent. Comparing disenrollment rates among HMOs operating in different markets may be misleading. Local market characteristics, such as the competition between plans or beneficiaries' familiarity with managed care, may affect plans' disenrollment rates. In some cases, a rate that is relatively high in one market might be relatively low in another. For example, in 1996 the highest disenrollment rate in the Portland-Vancouver area (7.4 percent) was below the lowest rate in Miami (10.1 percent).

Among plans operating in the same market, disenrollment rates varied substantially. In many markets, the highest disenrollment rate exceeded the lowest disenrollment rate by more than fourfold. For example, in Houston, Texas, the highest disenrollment rate was nearly 56 percent while the lowest rate was 8 percent. The data clearly indicate that competing plans vary widely in their ability to retain members but do not reveal why. Disenrollment rates that are high relative to rates at competing plans could, for example, be caused by plans' poor marketing practices, less-generous benefits, higher beneficiary out-of-pocket costs, or inferior service.

³Approximately 87 percent of the beneficiaries enrolled in Medicare managed care in December 1996 were in "risk contract" HMOs, so-called because the plan assumes the financial risk of providing care for the fixed per-beneficiary fee that Medicare pays.

HMOs in operation for less than 2 years tended to have higher annual disenrollment rates than older plans. However, rapid disenrollment rates—that is, the percentage of new members who left within 3 months of their enrollment—tended to be slightly lower for plans that were in operation for less than 2 years. Many HMO members who disenroll switch to fee-for-service Medicare. In markets served by at least two plans, more than one-third of disenrollees switched to fee-for-service.

Background

The number of Medicare beneficiaries enrolled in risk-contract HMOs more than doubled over the past 3 years, from 2.3 million in December 1994 to 5.2 million in December 1997. The number of Medicare risk HMOs increased from 154 to 307 over the same time period. The growth in Medicare managed care enrollees and plans is expected to continue, fueled in part by the BBA, which provided for new types of Medicare managed care plans and increased plan payments in many areas that previously lacked a fee-for-service alternative.

Recognizing beneficiaries' need for comparative information on available choices, the Congress included several consumer information provisions in the BBA. To help beneficiaries judge quality and performance, HCFA is required to publicize plans' disenrollment rates, enrollee satisfaction measures, health outcome measures, and record of compliance with certain requirements. HCFA is also required to provide beneficiaries with comparative information on plans' benefits, premiums, service areas, and supplemental benefits. HCFA is working to meet these requirements and recently launched an Internet Web page containing data on HMOs' benefits and premiums.

As we reported in 1996, Medicare beneficiaries voluntarily disenroll from their HMOs for a variety of reasons.⁴ High disenrollment rates may result from the poor education of enrollees during an HMO's marketing and enrollment process: enrollees may be ill informed about HMO provider-choice restrictions in general or the operation of their particular plan. High disenrollment rates may also result from beneficiaries' dissatisfaction with access or quality of care. Alternatively, high disenrollments may reflect a different aspect of relative satisfaction—beneficiaries' awareness that competing HMOs are offering better benefits or lower premiums. A 1992 study reported that 48 percent of disenrollees from Medicare HMOs cited dissatisfaction as their reason for leaving, 23 percent cited a misunderstanding of HMO services or

⁴GAO/HEHS-97-23, Oct. 22, 1996.

procedures, and 29 percent cited some other reason.⁵ While rates alone cannot distinguish among possible causes for disenrollment, a relatively high disenrollment rate should caution beneficiaries to investigate further before enrolling.

Currently, Medicare beneficiaries enrolled in an HMO may decide each month to switch to another available managed care plan or to fee-for-service. However, BBA provisions will curtail this option beginning in 2002.⁶

Disenrollment Rates Exceed 20 Percent at Many Medicare HMOs

Many Medicare HMOs across the nation experience high rates of beneficiary disenrollment. In 1996, annual disenrollment equaled 71 percent of average plan membership at PCA Health Plans of Florida (PCA-Jacksonville, Florida)—the highest HMO contract service-area disenrollment rate in the nation that year.⁷ Nearly 1 of 6 beneficiaries who joined PCA left the plan within 3 months. Of the 194 HMOs that operated a Medicare risk contract for at least 7 months in 1996 and had at least 250 members, about one-fifth (41) had annual disenrollment rates in excess of 20 percent. Rapid disenrollment—that is, the percentage of new members who left their plans within the first 3 months—was 10 percent or higher at 21 HMOs. Despite sometimes sizable membership losses, most Medicare risk HMOs (90 percent) attracted enough new members to increase in size during 1996.

In contrast, a number of HMOs had low disenrollment rates. Annual voluntary disenrollment was less than 5 percent of average membership at 31 HMOs in 1996. Rapid disenrollment rates were below 3 percent at 65 HMOs. (See tables 1 and 2.) Some of the national variation in disenrollment rates may be the result of differences among markets. For example, disenrollment rates may tend to be high in areas where competition is strong or where many beneficiaries are unaccustomed to managed care. In some cases, a rate considered relatively high in one market may be

⁵Frank W. Porell and others, *Factors Associated with Disenrollment from Medicare HMOs: Findings from a Survey of Disenrollees* (Boston: Health Policy Research Consortium of Brandeis University, 1992).

⁶Every November beginning in 2001, beneficiaries will decide how they will receive their Medicare benefits during the following year by selecting traditional fee-for-service, a managed care plan, or some other available option specified in the BBA. With some exceptions, beneficiaries are expected to remain in the health plan they select for the entire calendar year. However, beneficiaries will be able to make one switch during the first 6 months of 2002. In 2003 and beyond, beneficiaries will be able to make one switch during the first 3 months of each year. These switches are in addition to those made during the planned annual open season.

⁷Some HMOs had higher disenrollment rates in portions of their service areas.

considered low in another. For example, in 1996 the highest annual disenrollment rate in the Portland-Vancouver area (7.4 percent) was less than the lowest rate in Miami (10.1 percent).

Among Competing HMOs, Disenrollment Rates Vary Widely

Among plans competing in the same market, disenrollment rates often vary widely.⁸ For example, in Tampa, Florida, PCA had an annual disenrollment rate of 59 percent in 1996—much higher than the 10-percent disenrollment rate at Prudential Health Care Plan (see fig. 1). Nearly 12 percent of all new PCA members left the plan within the first 3 months

⁸An HMO's service area may extend over a wide geographic area and encompass more than one market area. To facilitate fair comparisons among competing plans, we defined market areas and computed the annual disenrollment each plan experienced within those market areas. Because of data limitations, we calculated rapid disenrollment rates over plans' entire contract service areas. In appendix II, we group plans by market and present their market area annual disenrollment rates. In appendix II, we also list disenrollment rates for each plan's service area. For a particular plan, market area and service area disenrollment rates can differ because disenrollment is not evenly distributed over the plan's service area.

of enrolling, while only 3 percent of Prudential’s new enrollees left that quickly. The differences in the disenrollment rates at the two plans cannot be explained by differences in plan size, experience, or market conditions. Both PCA and Prudential had been operating Medicare risk contracts for about 2 years and had approximately the same number of enrollees (7,600 and 9,200, respectively) in the Tampa market. Moreover, the wide variation in HMOs’ disenrollment rates is not unique to the Tampa market. In 55 percent of the markets served by four or more HMOs, the highest disenrollment rate was greater than four times the lowest rate in that market. For example, disenrollment rates ranged from 8 percent to 56 percent in Houston, from 3 percent to 34 percent in Los Angeles, and from 8 percent to 38 percent in Washington, D.C.

Figure 1: Annual Rate of Voluntary Disenrollment at HMOs in the Tampa Market, 1996, as a Percentage of Average Number of Plan Members

Source: Group Health Plan File, Feb. 1997.

New Member Disenrollment Rates Are Slightly Lower in New HMOs

New plans tend to have higher annual disenrollment rates than more established plans. This may be because older plans have learned through experience how to better satisfy their Medicare members. Alternatively, older plans may have a larger proportion of members who are accustomed to managed care or who are reluctant to make any health care changes. Thus, lower disenrollment rates at established HMOs may partly reflect the characteristics of their members. This latter explanation is supported by the data on rapid disenrollment rates. The disenrollment rate of new enrollees varies substantially among HMOs but tends to be slightly lower at HMOs with less than 2 years of experience.

Because of the rapid growth of Medicare managed care, many plans are relatively new. In 1996, 41 percent of Medicare HMOs had operated for less than 2 years and 15 percent had operated for less than 7 months (see fig. 2). According to HCFA officials, the BBA requires the agency to disclose disenrollment rates only for plans in operation for 2 or more years. However, the law does not prohibit HCFA from publishing rates of plans with less operating experience. We calculated disenrollment rates for HMOs with as little as 7 months of experience and a minimum membership average of 250 members per month. Appendix II lists HMOs' years of experience and average monthly membership because this information may be important to beneficiaries considering a particular managed care plan. (Fig. 3 shows the distribution of HMOs by average monthly membership.)

Many HMO Disenrollees Switch to Fee-for-Service Instead of Another Available HMO

Many beneficiaries who disenroll from a managed care plan switch to traditional fee-for-service Medicare. In areas served by only one plan, HMO disenrollees have no other option. However, many disenrollees could join a different managed care plan but switch to fee-for-service instead. In the 92 urban market areas served by two or more plans, more than one-third (36 percent) of HMO disenrollees switched to fee-for-service. Even in markets served by multiple plans, the proportion of beneficiaries changing to fee-for-service can be high. For example, in Miami—a market served by nine HMOs—more than 46 percent of beneficiaries who disenrolled from United HealthCare of Florida during 1996 switched to fee-for-service rather than join another HMO. (The percentage of each plan’s disenrollees who switched to fee-for-service is shown in app. II.)

Agency Comments and Our Evaluation

In commenting on a draft of this report, HCFA officials agreed that the variation of HMO disenrollment rates among plans operating in the same markets is useful information. HCFA is interested in making disenrollment information more meaningful by developing a disenrollment survey to determine why beneficiaries leave HMOs. In addition, HCFA officials said

they are interested in factors that might explain the variation in rates, such as quality of and access to care, NCQA accreditation, incidents of fraud or abuse, and the extent of the provider network. However, at the time the officials made these comments, HCFA had not decided on its methodology for calculating disenrollment rates or the minimum size and age of plans it would report rates on. HCFA officials said they will address these and many other methodological issues before HCFA publishes disenrollment rates—currently scheduled for the fall of 1999.

As agreed with your office, unless you publicly announce its contents earlier, we plan no further distribution of this report until 30 days after its issue date. We will then send copies to appropriate congressional committees, the Secretary of Health and Human Services, and others who are interested.

If you have any questions about this report, please contact me at (202) 512-7114 or James C. Cosgrove, Assistant Director, at (202) 512-7029. Other contributors include George M. Duncan, Beverly Ross, and Wayne Turowski.

Sincerely yours,

William J. Scanlon
Director, Health Financing
and Systems Issues

HCFA	Health Care Financing Administration
HMO	health maintenance organization
MSA	metropolitan statistical area
NECMA	New England county metropolitan area
PMSA	primary metropolitan statistical area

Methodology

We used Health Care Financing Administration (HCFA) data to compute beneficiary disenrollment rates for each health maintenance organization (HMO) that operated a Medicare risk contract during 1996. To measure voluntary disenrollment, we excluded disenrollments caused by death, loss of Medicare eligibility, or moves outside plans' service areas. We also did not count as voluntary disenrollment administrative changes such as one plan merging with another.

Data Sources

We used the February 1997 Group Health Plan (GHP) file to identify beneficiaries who were enrolled in a risk plan during any part of 1996. We then merged enrollees' GHP data with additional data contained in the enrollment database. From these data, we calculated monthly new enrollments, new disenrollments, and membership at all risk plans operating in 1996.

We used HCFA's October 1996 Service Area File to determine the counties and parts of counties each plan served. We used this information to group HMOs in market areas defined by metropolitan statistical areas (MSA) or New England county metropolitan areas (NECMA) in the six New England states. To calculate plans' market area disenrollment rates, we analyzed disenrollment within the MSA or NECMA in comparison with the plans' membership within the same area.

Rate Calculations

To compute total voluntary disenrollment rates, we first divided the sum of 1996 voluntary disenrollments by the number of member-months (the sum of total monthly enrollments for each month in 1996), to compute a rate of disenrollment per member-month. We then multiplied this result by 12 to obtain the rate per member-year (this rate could represent a single member who stayed in the plan for all 12 months or 12 members who each stayed in the plan for only 1 month). Finally, we multiplied the result by 100 to express disenrollment per 100 member-years. Conceptually, this disenrollment rate compares a plan's total voluntary disenrollment with its average monthly membership. For example, a plan that had voluntary disenrollments of 1,000 members during 1996 and averaged 5,000 members per month would have a total voluntary disenrollment rate of 20 percent. This methodology is conceptually similar to, but computationally somewhat different from, the methodology in our October 1996 report.⁹

⁹GAO/HEHS-97-23, Oct. 22, 1996.

Appendix I
Methodology

We analyzed whether HMO disenrollees switched to a different managed care plan or to fee-for-service. For each HMO, we then calculated the proportion of disenrollees who switched to fee-for-service.

We computed each plan's rapid disenrollment rate by summing its 1996 disenrollments that occurred within 3 months of enrollment and divided that sum by total new enrollments from November 1995 to December 1996.

Medicare Risk HMO Voluntary Disenrollment Rates, 1996

The four tables in this appendix detail the voluntary disenrollment rates, by Bureau of the Census major geographic region—Northeast, South, Midwest, and West—for Medicare risk HMOs.

Explanation of Column Headings

Metropolitan area: U.S. Bureau of the Census statistical area: metropolitan statistical areas (MSA), primary metropolitan statistical areas (PMSA), or New England county metropolitan areas (NECMA).

HCFA contract #: Plan contract number assigned by HCFA.

Plan name: Name of risk plan as reported by HCFA.

Plan age: Number of years and months between the plan's first enrollment of beneficiaries and December 31, 1996.

Average monthly membership: Average monthly membership in 1996.

Vol. rate: Voluntary annual disenrollment rate.

FFS as % of vol.: Percentage of disenrollees who switched to Medicare fee-for-service.

Rapid rate: Percentage of new members who disenrolled within 3 months of enrolling.

Sort Order

Plans are listed by census region and metropolitan area. In metropolitan areas with two or more plans, plans are listed in descending order of voluntary disenrollment rate.

^aThis plan either had an average enrollment of less than 250 or was in operation 6 months or less.

Ordering Information

The first copy of each GAO report and testimony is free. Additional copies are \$2 each. Orders should be sent to the following address, accompanied by a check or money order made out to the Superintendent of Documents, when necessary. VISA and MasterCard credit cards are accepted, also. Orders for 100 or more copies to be mailed to a single address are discounted 25 percent.

Orders by mail:

U.S. General Accounting Office
P.O. Box 37050
Washington, DC 20013

or visit:

Room 1100
700 4th St. NW (corner of 4th and G Sts. NW)
U.S. General Accounting Office
Washington, DC

Orders may also be placed by calling (202) 512-6000 or by using fax number (202) 512-6061, or TDD (202) 512-2537.

Each day, GAO issues a list of newly available reports and testimony. To receive facsimile copies of the daily list or any list from the past 30 days, please call (202) 512-6000 using a touchtone phone. A recorded menu will provide information on how to obtain these lists.

For information on how to access GAO reports on the INTERNET, send an e-mail message with "info" in the body to:

info@www.gao.gov

or visit GAO's World Wide Web Home Page at:

<http://www.gao.gov>
